

JOSEPH OLUTIMEHIN

CLOUD ENGINEER | GOOGLE CLOUD CERTIFIED

Toronto, ON, Canada | jsatimehin@gmail.com | linkedin.com/in/joseph-olutimehin | github.com/josephdara

PROFESSIONAL SUMMARY

Google Cloud Certified Associate Cloud Engineer with 4+ years of experience in security engineering, backend development, and incident response, complemented by hands-on cloud infrastructure engineering on Google Cloud. Currently designs, builds, and operates a live event-driven platform using Compute Engine, Cloud Run, GKE, VPC, IAM, Cloud Storage, Cloud SQL, Pub/Sub, Cloud Monitoring, and Cloud Logging. Automates infrastructure and delivery with Terraform, Cloud Build CI/CD, Docker, Kubernetes, Linux, Bash, gcloud CLI, and GitHub Actions, bringing a security-first approach to reliable cloud operations.

CERTIFICATION

Google Cloud Associate Cloud Engineer | Google Cloud

Issued Jul 27, 2026 | Expires Jul 27, 2029 | Certification ID: 0e97354c793b4d6ea3186b77d3674f48 | [Verify credential](#)

TECHNICAL SKILLS

Cloud Platforms: Google Cloud Platform (GCP), Compute Engine, Cloud Run, GKE, Cloud Storage, Cloud SQL, Pub/Sub, Artifact Registry, Cloud CDN, Cloud Armor, IAM, VPC

IaC, CI/CD & Automation: Terraform, Cloud Build, GitHub Actions, Docker, Kubernetes, Linux, gcloud CLI

Languages: TypeScript, JavaScript (Node.js), Python, Solidity, Bash

Networking: VPC design, subnetting, firewall rules, DNS, Cloud NAT, load balancing, TLS and certificate management

Security: IAM least privilege, service accounts, Workload Identity, secrets management, network segmentation, threat modeling, secure SDLC

Observability: Cloud Monitoring, Cloud Logging, structured logging, uptime checks, SLO and alerting design

Web & Backend: Express, NestJS, Next.js, React, Redis

SELECTED CLOUD PROJECTS

Stablecoin Whale Monitor v3 | Event-Driven Google Cloud Platform | [GitHub](#) | [Live site](#)

- Designed and deployed a Terraform-managed GCP platform that indexes confirmed Ethereum mainnet USDC and USDT transfers into immutable NDJSON objects in private Cloud Storage, using generation-guarded checkpoints for idempotent crash recovery.
- Containerized the Node.js indexer, Express API, and Nodemailer alerter with Docker; ran continuous processing on a Cloud Run Worker Pool and least-privilege Cloud Run services with Pub/Sub OIDC push, Secret Manager, lifecycle retention, retries, and dead-letter handling.
- Served a statically exported Next.js and React dashboard from a private GCS origin through a global HTTPS load balancer, Cloud CDN, and Cloud Armor; routed `/api/*` to Cloud Run through a serverless NEG.
- Built approval-gated Cloud Build CI/CD with tests, typechecking, Terraform validation, immutable Artifact Registry digests, release-tag deployment, and smoke tests; added Cloud Monitoring and Logging alerts for uptime, p99 latency, degraded health, Pub/Sub backlog, dead-letter depth, and indexer liveness.

Bank Shared VPC & PSC | Multi-Project Network Architecture on Google Cloud | [GitHub](#) | [Write-up](#)

- Built a banking-style four-project GCP environment on a Shared VPC with subnet-level IAM delegation and identity-based firewall rules, provisioned entirely with Terraform.
- Published an internal passthrough load balancer to a partner VPC over Private Service Connect, and aggregated VPC Flow Logs into BigQuery for network visibility.

PROFESSIONAL EXPERIENCE

Cloud Platform Engineer | **Stablecoin Whale Monitor (Self-employed)** | Jun 2026 - Present

- Designed, built, and operate a live Google Cloud platform that monitors large USDC and USDT transfers on Ethereum, evolving it from Compute Engine VMs to Cloud Run/GKE and a Terraform-managed serverless architecture.

- Built modular infrastructure using Cloud Run, Cloud Run Worker Pools, Cloud Storage, a global external Application Load Balancer, Cloud CDN, Cloud Armor, IAM, Secret Manager, and Cloud Monitoring.
- Implemented approval-gated CI/CD with Cloud Build, immutable container releases, automated testing, and deployment smoke tests.
- Applied least-privilege IAM, private storage, secured ingress, and workload-specific service accounts.
- Improved reliability through crash-safe checkpointing, idempotent processing, observability, and production incident troubleshooting.

Security Engineer | Coinbase | Feb 2025 - Jun 2026

- Led smart contract security reviews for the Base-Solana Bridge, x402 payment protocol, Base Azul network upgrade, and numerous other Coinbase core projects, assessing smart contract vulnerabilities, trust boundaries, cross-chain security failures, upgradeability issues, and integration and rollout risks.
- Conducted multiple ecosystem security reviews for protocols integrating with Base, defining remediation requirements and release gates before integration or launch.
- Built and maintained internal AI-powered smart contract auditing tooling used across the security organization to support repeatable review workflows.
- Served on call for security incident response, triaging live security incidents and coordinating resolution across engineering and security teams.

Independent Security Researcher | Jan 2023 - Jan 2025

Code4rena, Cantina, Sherlock, Immunefi, Codehawks, QuillAudits

- Completed 30+ smart contract security reviews, identifying 50 High- and Medium-severity vulnerabilities validated and accepted by protocol teams.
- Reviewed a broad mix of DeFi and interoperability protocols, including AMMs, lending markets, stablecoins, vaults, bridges, and omnichain infrastructure, applying threat modeling and secure-SDLC analysis.

Developer Advocate | INTMAX | Oct 2023 - Apr 2024

- Contributed to zero-knowledge developer documentation for a ZK rollup, covering protocol concepts, integration guides, and onboarding material for external teams building on the network.
- Drove protocol education and developer onboarding through technical presentations at Google DevFest Lagos and Africa Tech Summit in Nairobi.

Software Engineer (Smart Contract) | Astraverse | Sep 2022 - Jun 2023

- Built a Gaming and Fashion protocol on Ethereum, writing and testing all smart contracts.
- Designed and deployed ERC-1155 token contracts for the marketplace platform.
- Built Node.js and TypeScript APIs, integrating backend services with deployed contracts via Ethers.js and Wagmi, and handled integration with the frontend team.

Software Engineer | Collect Waves | May 2022 - Sep 2022

- Built NFT and marketplace contracts with ERC-20 token integration, and the API services supporting them.
- Delivered the full application stack around the contracts: a frontend connected to on-chain state, and Node.js and TypeScript REST APIs for off-chain data.
